Isoform 1 is expressed preferentially in brain; isoform 2 in prostate. SIMICARITY: Belongs to the peptidase SI family. Kallikrein
                                                                                                                                                                                                 and mouse cDNA sequences.";

Proc. Natl. Acad. SG1. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Possible multifunctional protease. Efficiently cleaves
bz-Phe-Arg-4-methylcoumaryl-7-amide, a kallikrein substrate, and
wakly cleaves other substrates for kallikrein and trypsin.
-!- SUBCELULAR LOCATION: Secreted.
-!- ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Charge relay system (By similarity).
